

Baking Soda Drain Cleaner And Freshener

Ingredients:

- 1 c. baking soda
- 1 c. white vinegar (or some people use salt)
- 2 quarts of boiling water

Directions:

Pour baking soda down the drain.

Pour the vinegar or salt down the drain.

If using the vinegar you should wait about 5-10 minutes and then flush with the boiling water being careful not to burn yourself.

If using the salt it would be best to wait a bit longer or even overnight, if possible, before flushing with boiling water.

The drain should smell fresher and if it was clogged it will begin to unclog itself.

Stubborn clogs may take a bit of time to clear and you can repeat with boiling water every 10 minutes or so until it is running smooth.
